

XENTRINOBOT MANUAL 1.0

Hi-Techno Barrio

Hi-Techno Barrio

Christopher M Coballes
BSCoE, BSECE, BSEE, MIS

TABLE OF CONTENTS

Part I

Assembly Guide

Parts & materials

2WD mobile robots

4WD mobile robots

1-3 decks

Nuts & bolts

Motor and wheels

Positioning Lidar

Electronics Guide

Battery

Board

Driver modules

Circuit Connections of motors

Check polarity of IMU

Connect Lidar

Single Board Computer Guide

OS image downloading (Ubuntu Mate)

Software imager downloading

SD Card imaging

Running the OS for the first time in SBC

Libraries and driver installations

Installing ROS

Downloading from the github

Install software or libraries to setup ROS

Install the ROS package

Create workspace

Download xentrirobot ROS package in the workspace

Compile the ROS package

Installing XentrinoBot

Downloading firmware from the github
Installing libraries and main source code
Installing firmware using platform.io
Installing firmware using Arduino IDE

Configuration of Xentrinobot

Modify the xentrinobot_base_config.h
Set mobile robotics wheels platform
Set the controller and drivers

Communicate ROS and Xentrinobot

Testing motors, imu and encoders
Tuning PID
Calibrating IMU
Checking Lidars

PART II

Getting started w/ ROS

Xentrinobot Base Controller

Odometry

Laser Sensor

Transformation

Creating a Map

Autonomous Navigation

Part III

Designing Robot

Understanding the firmware

Understanding the ROS source code and libraries

Setup Xentrinobot into different mobile robotics configurations.

Part IV

Xentrinobot applications

Line following xentrinobot

Web controlled xentrinobot

Using OpenCV for road and lane detection

Adding different sensors

Part V

AI Symbolic using Xentrinobot

Machine Learning using Xentrinobot

Deep Learning using Xentrinobot
